

$\LaTeX\{\}$

$\LaTeX\{\}$ is a typesetting program that produces beautifully formatted documents from a raw text file. See [here](#) for an example with a [template and resources](#) to get started.

There are two basic components to using \LaTeX . You need to install:

1. The \TeX packages, and
2. A \TeX editor.

OS X

- Download and install [MacTeX.mpkg.zip](#) (6.0 GB).
- Go to Applications/TeX/ and run TeX Live Utility
- Actions → Update All Packages

Microsoft Windows

- See the [MikTeX](#) page.
